PROFILE

Full-stack developer in the final year of a Business Computing degree. During an internship at Moov Africa, designed a complete network monitoring application: device discovery, SNMP collection, SLA-driven tickets and automatic escalation. Creator of FasoCommerce, a live modular SaaS platform (15 modules, 453 backend tests), and of JL EXPRESS, a mobile app delivered to a client. Brings in AI and automation where they add real value.

EXPERIENCE

Developer intern — network monitoring — Moov Africa

Final-year internship | Ouagadougou

- Designed and built a network monitoring web application in Python / Flask (SQLAlchemy, MySQL).
- Automatic discovery of devices (Nmap, parallel ICMP ping) and SNMP collection: availability, latency, CPU, RAM, interfaces.
- Full incident lifecycle: threshold alerts, tickets with per-priority SLAs, automatic escalation over three levels, email notifications.
- SLA / MTTR reports in CSV and PDF; scheduled jobs (monitoring, backups, retention). Validated in a lab environment.

PROJECTS

JL EXPRESS — Management mobile app for a courier (client)

Delivered | October 2026 | Flutter, Dart, SharedPreferences, PDF

- Jobs, clients, daily money, change calculation, PDF receipts and a WhatsApp visual studio; Android app delivered to the client.

FasoCommerce — SaaS management platform for shops and services

Live | Since June 2026 | Next.js, TypeScript, FastAPI, PostgreSQL, Docker

- 15 modules, 13 trade profiles, 453 backend tests.
- Modular monolith: each business turns on the modules its trade needs (restaurant, dry cleaning, driving school, garage…).
- Offline point of sale, Mobile Money payment, WhatsApp orders; end-to-end and accessibility tests, continuous integration.

ForexSaaS — Decision-support tool on market data

Paused | Python, FastAPI, pandas, Celery, Next.js

- 3 data sources, 5 analysers.
- Collection → analysis → scoring → alerts pipeline (Twelve Data, FRED, Finnhub), decoupled Celery jobs.
- Confluence and confidence scores, per-pair risk calculation, backtesting on historical data.

Taxi Compteur — Real-time ride-hailing mobile app

Academic project | Flutter, Firebase

- Customer and driver modes, GPS tracking, distance-based fare, real-time Firebase sync.

SKILLS

Backend: Python (very good), FastAPI, Flask, Laravel (intermediate), REST APIs, JWT
Frontend: JavaScript (good), TypeScript, React (intermediate), Next.js (intermediate), Angular (intermediate), HTML / CSS, WordPress
Mobile: Flutter, Firebase, Ionic (basics)
Data: PostgreSQL, MySQL, SQL, Redis, pandas
DevOps and quality: Git, GitHub Actions, Docker, pytest, Playwright, Vercel / Netlify
Networking: Nmap, SNMP, ICMP, TCP/IP
AI and automation: Scheduled jobs, Data analysis, API integration

EDUCATION

Bachelor's degree (3rd year) — Business Computing — Université de l'Unité Africaine (UA), formerly IAM | 2025–2026

CERTIFICATION

Office and design — Word, Excel, PowerPoint, Canva — SAPSAP XENDER | 2023

LANGUAGES

French (fluent), English (intermediate)
